

## CAP24 Grid Development Report (Distribution)

*ESB Networks Response to Climate Action Plan EL / 24 /15*

EL/24/15	Submit to DECC timelines of large-scale onshore grid development projects to be delivered in 2024 and publish an appropriate version
----------	--

### Background

As per CAP action EL/24/15, System Operators are to submit a report on large-scale onshore grid development projects to be delivered in 2024 to DECC and publish an appropriate version of same.

This document is the ESB Networks response in Q1 2024 to that action.

### Rationale

This report contains information relating to grid development projects that either have been or are forecast to be delivered / energised to the electrical distribution system in the Republic of Ireland in 2024.

The projects are split into three distinct elements:

1. Grid reinforcement
2. Generation connection
3. Demand connection

### Grid Reinforcement

These are larger scale distribution projects that are required to reinforce the high voltage electrical distribution system which either have been energised or are forecast to be energised in 2024. High voltage distribution projects are classified as having a voltage level of 110 kV or 38 kV in ESB Networks distribution system.

Note that projects classified as Asset Replacement are not included in this list. These are projects that are required to replacement equipment on the system to address issues such as obsolescence.

### Generation Connections

These are larger scale distribution projects driven by and attributable to a request for a generation connection to the distribution system. This includes all utility scale generation projects, including renewables, conventional generation (thermal) and battery energy storage which either have been

energised or are forecast to be energised in 2024. Mini, micro and small-scale generation are all excluded.

In addition, the Maximum Export Capacity (MW) for each project has been provided, along with the generation technology type.

### Demand Connections

These are larger scale distribution projects driven by and attributable to a request for a demand connection to the distribution system. These are defined in this report as projects that have a Maximum Import Capacity equal to or in excess of 4 MVA.

In addition, the Maximum Import Capacity (MVA) for each project has been provided.
